fortran continuation lines limited to 99

Published 05/30/2006

Symptom(s):

fortran continuation lines limited to 99

Fact(s):

MIPSpro Fortran 77 Compiler
MIPSpro Fortran 90 Compiler

SGI Solution:

This is a limit, there is no fix.

Cause(s):

The reason for the behavior of the compiler is that the Fortran J3 spec. calls for a limit of 19 continuation lines (fixed form) and 39 continuation lines (free form). Sgi decided back in the 2000 to set our limit at 99 lines for both f90, fixed and free form, and 99 lines for f77 fixed form - there is no free form in f77.
